## Critical Incident Response Procedures and Critical Incident Response Chart for a Non-Club status Motor Sport Event

---

*These procedures are to be followed in the event of a Critical Incident at a non-club status motor sport event, after the incident has been stabilised following standard emergency procedures under direction from the Clerk of the Course. Effort has been made to ensure this document uses terminology that readily applies to each motor sport discipline equally as well as to external responding organisations such as police.*

*The two key roles in these procedures are the Motor Sport Incident Coordinator, and the Motor Sport Incident Controller. When dealing with outside organisations, it is advisable to refer to them in their full titles to differentiate them from similar titles within the outside emergency agencies.*

*The actions listed here in the chart are described in more detail in the CAMS Critical Incident Protocols which is available from CAMS.*

*This document will assist motor sport organisers cope with the pressures and demands of responding to a Critical Incident, and to facilitate the liaison and cooperation between the Event Organisers, Police, and any other external Emergency Services. The response referred to is a response to the fact of a fatality. The normal responses to fire, casualty, collision or similar continue to be directed by the Event Headquarters/Command or Race Control.*

*For major events, representatives of the Organiser, Promoter, and Police should meet shortly before the event, to agree on their overall approach should a Critical Incident occur.*

*You should be aware that any documents (photographs, messages, letters, etc.) which are created in relation to the incident may be required to be disclosed to authorities or in court proceedings on request. It is important that you ensure that everyone involved in the course of investigating the incident is aware of this from the start. If you have concerns about the investigation you should speak with your lawyer about ways in which you may be able to protect your documents from having to be disclosed.*

## DETAIL OF PHOTOGRAPHS REQUIRED

Photographs are invaluable in recording evidence following an incident, and sometimes in advance of and during the incident.

The Incident Coordinator should check with photographers close by the incident in case they have photographs of the incident or the area involved (before and after). If they do, ask for copies as quickly as possible, and also record their names and addresses.

If there is a photographer present whom you know and trust, ask him to take the necessary photographs of the incident site as required, and ensure that they are then passed over to you at the circuit if possible. He may insist they remain his photographs, in which case he may retain copies, and you should then ensure that he will allow you to do what is required with them.

If there is no professional photographer present, have an official or yourself take the photographs. Police will also take photographs, but they will not always make them available to you. If possible, arrange a swap of photographs between yourself and the police so that you have the maximum available for use by each party.

Photos must show as much as possible, exactly what happened, what the result was, and what evidence remained that could assist investigations.

- General scene of the incident, distance, close-up and from different angles. Some photos should show general infrastructure in the area, such as signs, trees, fences, barriers etc.
- Any tyre marks on track/course or verges and gravel beds, indicating directional movement of the vehicle, and skid marks.
- Damage to infrastructure, particularly with vehicle still in place.
- Debris in the area, with an object such as a matchbox or drink bottle as well to indicate size of debris.
- Trail of debris to indicate direction of vehicle, or of debris following impact. Any debris in spectator area is particularly important.
